Instrument Cleaning Guide

Spaulding's Classification of Medical Equipment/Devices and Required Level of Processing/Reprocessing

Classification	Definition	Level of Processing/Reprocessing
Critical Equipment/Device	Equipment/Device that enters sterile tissues, including the vascular system	Cleaning followed by Sterilization
Semi-critical Equipment/Device	Equipment/Device that comes in contact with non-intact skin or mucous membranes but does not penetrate them	Cleaning followed by High Level Disinfectant (as a minimum requirement). Sterilization is preferred
Noncritical Equipment/Device	Equipment/Device that touches only intact skin and not mucous membranes, or does not directly touch the client/patient/resident	Cleaning followed by Low Level Disinfectant (in some cases, cleaning alone is acceptable)

Cleaning

Never keep used/dirty instruments in a dry container. Make sure BLOOD and DEBRIS don't have a chance to dry. If you are unable to process them right away use:

An Enzymatic Cleaner to help to remove organic material

#042-EBL1 Enzyclean® instrument cleaner, pre-soak single, 3.8L

#517-10-4100 EmPower™ dual enzyme instrument cleaner, 3.8L

Or a neutral pH detergent:

#042-B1 Low suds instrument cleaner, 3.8L

Always rinse off chemicals with distilled water.

ULTRASONIC CLEANING is usually recommended as the best way to clean surgical instruments.

#594-CSU1 Ultrasonic cleaner, 1 gallon

MANUAL CLEANING: Use stiff brushes to make sure all visible dirt is removed.

#444-10-1651-X Nylon bristles instrument brush

Use a surgical instrument cleaner

#042-B1 Low foaming neutral base instrument cleaner, 1 gallon

#067-002900 Organisol instrument cleaner, 4lb container, with scoop

Make sure everything looks sharp and all moving parts are working correctly.

High Level Disinfection

Keep in mind safety, efficacy, compatibility, and the environment.

Accelerated Hydrogen Peroxide

Not recommended for instruments with brass, copper, or tungsten carbide.

Prevention—5-minute HLD for respiratory and plastics. 6-hour chemosterilant

#909-11505 4L bottle

CS20—20-minute chemosterilant

#909-11405 4L bottle

Sterilization

It is recommended that all surgical instruments be autoclaved, if possible.

#144-M11-022 Midmark M11 autoclave, 11" x 18" chamber

Always use distilled water in your autoclave.

#320-100400902 Distilled water, 4L, case of 4

* Western Canada: use product code #781-AQ00334

Lubricate all moving parts.

#042-T2 Instrument lubricant, 1 gallon

Use self-seal pouches to autoclave and store your instruments.

#164-SS1 Self-seal clear pouch, 3.6" x 8", box of 200

#164-SS2 Self-seal clear pouch, 3.6" x 10", box of 200

#164-SS4 Self-seal clear pouch, 5" x 10.5", box of 200

(Other sizes available)

Use chemical or biological indicators regularly to ensure your autoclave is working properly.

#800-1243B Steam sterilization integrator, bag of 100

#800-1262P Attest® biological indicators, box of 25

#800-116 Attest® biological indicator incubator

#800-115C Biological indicator monitoring starter kit. Consists of indicator tape, biological indicators, incubator, chemical integrators, log book, inservice video and wall chart.

For instruments that can't be autoclaved or only require High Level Disinfection (HLD), use a chemosterilant soak.

Check with your Territory Manager to see what cold soak is right for you.

Company Introduction / Sizing Guide

Attends Healthcare Products

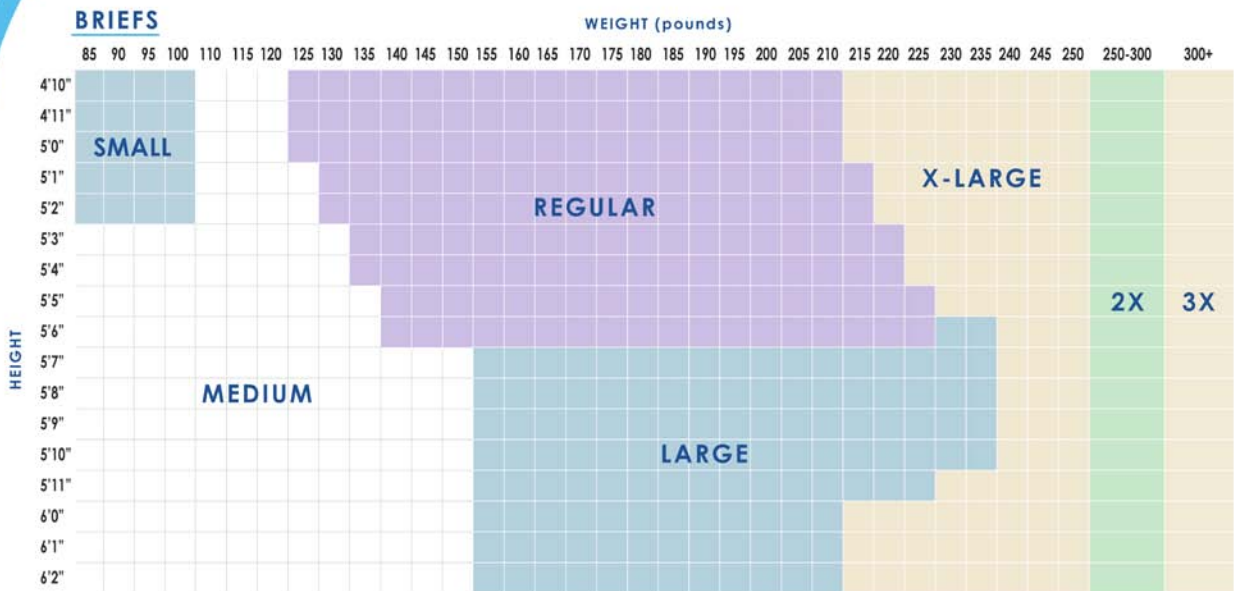

Attends has been providing the North American market with high-quality, high-performing adult incontinence care products since we pioneered the disposable category in 1979. Now more than 30 years later, Attends maintains its position as a recognized, accepted and trusted brand. We have become a mainstay, and our focus endures—to design and manufacture leading technologies for a growing population of adults who experience incontinence and the caregivers who seek to provide better health outcomes.

In 2011, Attends was acquired by the Montreal, Quebec-headquartered Domtar Corporation, a publically-traded company with a long and storied history in fiber-based product development, marketing and distribution in Canada and around the world. Attends North America and Attends Europe now provide a new end-use for the fiber that Domtar once used almost exclusively for pulp in the papermaking process. With the global Attends brand now under its umbrella, Domtar is firmly positioned for long-term growth in a growing market.

Sizing Guide

Choose the right size Brief the quick and easy way! Simply find the user's height and weight below to see what size is recommended. Basic and Basic+ Bathing Systems

This smaller variable height, recumbent system utilizes the same principles as the larger Magic™. The primary difference between the Basic and the Basic+ is that the Basic does not require back control panel as the controls in the Basic system are conveniently hidden within the side walls. Providers of upscale retirement and assisted living facilities will immediately see the benefit of this system as the bath blends well in a non-obvious fashion with the buildings character. When required though the bath can be height adjusted to allow an attendant to help as well as can be easily integrated with an existing floor lift or a wet lifter.

Company Introduction / Sizing Guide

Attends Healthcare Products

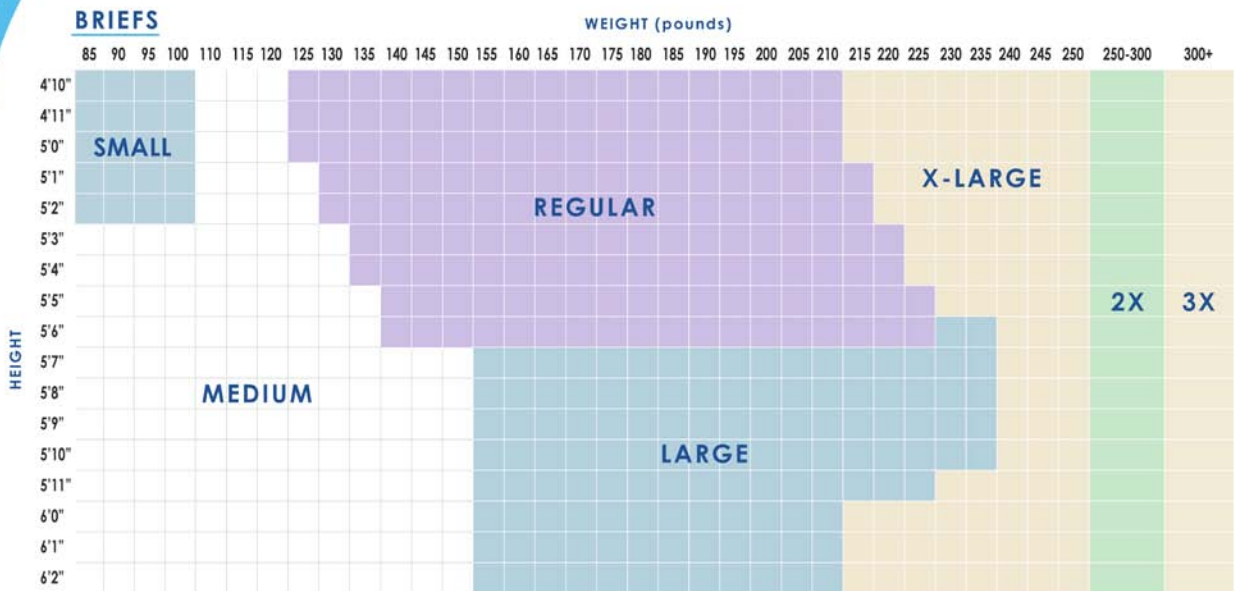

Attends has been providing the North American market with high-quality, high-performing adult incontinence care products since we pioneered the disposable category in 1979. Now more than 30 years later, Attends maintains its position as a recognized, accepted and trusted brand. We have become a mainstay, and our focus endures—to design and manufacture leading technologies for a growing population of adults who experience incontinence and the caregivers who seek to provide better health outcomes.

In 2011, Attends was acquired by the Montreal, Quebec-headquartered Domtar Corporation, a publically-traded company with a long and storied history in fiber-based product development, marketing and distribution in Canada and around the world. Attends North America and Attends Europe now provide a new end-use for the fiber that Domtar once used almost exclusively for pulp in the papermaking process. With the global Attends brand now under its umbrella, Domtar is firmly positioned for long-term growth in a growing market.

Basic and Basic+ Bathing Systems

This smaller variable height, recumbent system utilizes the same principles as the larger Magic™. The primary difference between the Basic and the Basic+ is that the Basic does not require back control panel as the controls in the Basic system are conveniently hidden within the side walls. Providers of upscale retirement and assisted living facilities will immediately see the benefit of this system as the bath blends well in a non-obvious fashion with the buildings character. When required though the bath can be height adjusted to allow an attendant to help as well as can be easily integrated with an existing floor lift or a wet lifter.

- Tunable diaphragms on both the adult and pediatric sides of the chestpiece
- Single-piece diaphragm that's easy to attach and easy to clean because the surface is smooth and without crevices
- Open bell versatility allows the pediatric side to convert to a traditional open bell by replacing the single-piece diaphragm with a non-chill sleeve
- Next-generation tubing with improved resistance to skin oils and alcohol for longer tubing life. Less likely to pick up stains
- Chestpiece is precision-machined into an aesthetically pleasing, less angular shape. The stem features an open side indicator
